WHAT IS CLAIMED IS:

5

15

20

1. An apparatus for treating diseased skin with ultraviolet (UV) light, the apparatus comprising:

a source of UV light within the range of 300 and 315 nanometers; and a cooler for cooling the diseased skin.

- 2. An apparatus for treating an area of diseased epidermal tissue with ultraviolet UV light, the apparatus comprising:
- a source of high intensity ultraviolet light equal to or greater than about 1 minimum erythema dose (MED) in the wavelength range of between about 300 and 315 nanometers having an output for emitting the UV light;

a conduit positioned to receive said ultraviolet light, said conduit having an output end that emits said UV light;

- a delivery device that includes said output end of said conduit; and a cooler included in said delivery device.
- 3. The apparatus of Claim 2, wherein said delivery device has a localized UV output sufficiently small to illuminate a portion of skin no larger than said area of diseased epidermal tissue.
- 4. A method for treating an epidermal region comprising diseased tissue, the method comprising:
- cooling the diseased tissue and exposing the diseased tissue in said epdermal region to a dosage of ultraviolet light equal to or greater than about 1 minimum erythema dose (MED) in the wavelength range of between about 300 and 315 nanometers.
